

Youth Artificial Intelligence (AI) Training Program RFQ

Questions and Answers

1. For the requirement to serve **200 youth annually**, does EMI expect all 200 youth to complete a multi-week training cohort, or may the 200 youth be served through a tiered pathway that includes structured one-hour AI literacy workshops with pre/post assessments and a mini project artifact, with a subset of students advancing into deeper four-week AI Ready cohorts? [Providers must propose a training model that serves 200 youth annually and meets the RFQ deliverables, including measurable skill gains and completed training projects or portfolios. EMI does not require a specific cohort length or service structure. Respondents may propose tiered or progressive training models, provided they clearly describe how participants will be served and how required outcomes will be achieved.](#)
2. Is there an anticipated budget range or target cost per participant that EMI would like respondents to stay within for this RFQ? [EMI has not established a predetermined budget range or target cost per participant for this procurement. Respondents should propose reasonable and cost-effective pricing and include a detailed budget, cost per participant, and supporting cost justification as outlined in the RFQ.](#)
